分子优化-Chem-CoT 数据集质量评测

目标: 评测单目标分子优化任务的Benchmark对应的sample, Deepseek生成的思维链质量如何, 并修改错误位置

下面是一个其中的例子:

- 1. 我们可视化了QED属性对应的large分子对以及他的思维链,发现在对源分子进行结构分析时(思维链第一段)会存在一些结构上的识别错误(主要是环结构有问题)
- 2. 为此,我们需要:
 - a. 记录整个思维链中针对**分子片段(苯甲基 / 吡啶 ...)的描述**一共有多少个,记录在<mark>total_entity</mark>中
 - b. 查看这些**分子片段是否错误**,记录错误数量在<mark>error_entity</mark>中
 - c. 修改这些错误的分子片段
 - · Chain-of-Thoughts Distillation Samples: QED-large

我们会提供一个 json文件,包含20个large-molecule的CoT标注,改哪些位置如下(<mark>即 cot_result, total_entity, error_entity)</mark>

                     \"Structural Analysis of Source Molecule\": \"The source molecule contains a central piperazine ring
linked to a diphenylethoxy group and a ketone-substituted furan ring. The furan ring (c1ccco1) is unsubstituted and lacks
electron-withdrawing/halogen substituents, which are common in DRD2-active compounds. The diphenylethoxy group provides
lipophilicity but may reduce selectivity.\",\n \"Property Analysis\": \"DRD2 activity requires optimal aromatic/
hydrophobic interactions and balanced polarity. Unsubstituted furan rings often exhibit weaker receptor binding due to
insufficient electron density modulation and limited hydrophobic surface area.\",\n \"Limitation in Source Molecule for
Property\": \"The unsubstituted furan ring (c1ccco1) reduces binding affinity by limiting hydrophobic interactions and
electron density effects critical for DRD2 engagement. The absence of halogen substituents further diminishes potential
halogen-bonding interactions.\",\n \"Optimization for Source Molecule\": \"Introduce a bromine atom at the para position
of the furan ring to enhance hydrophobic interactions, electron-withdrawing effects, and potential halogen bonding. This
modification_retains the core scaffold while improving DRD2 binding.\",\n \"Final Target Molecule\": \"O=C(CCN1CCN(CCOC
